**NetVersant's Mid-Atlantic Region Adopts
Innovative CIS Technology**

ARLINGTON, VA, MARCH 28, 2007 – Beast Cabling Systems, Inc., a leading provider of advanced Cabling Installation Systems (CIS) components, today announced that NetVersant Solutions will implement CIS for low-voltage voice and data cabling installations.

A leading national provider of comprehensive and integrated network infrastructure solutions for technology, financial, retailing, communications, education and healthcare industries, NetVersant will roll out its CIS capabilities on all installations in the Mid-Atlantic region, which includes Northern Virginia, Maryland, and Washington, D.C. markets.

CIS is an innovative system of components designed to bring systemization and control to the various tasks required to properly install network cabling. CIS enables consistent, efficient installations that conserve time and material, reduce errors, and enhance industry best practices for overall better network performance.

"We researched CIS technology and found that Beast Cabling Systems offered the best value and most innovative products for enhancing the cabling installation process. The Mid-Atlantic region is extremely active for NetVersant, and any tool that can facilitate keeping our crews on schedule while ultimately providing customers with better network performance, will help maintain our success in this area," said Jeff Bates, NetVersant's General Manager, Mid-Atlantic. "Over the next several months, we will deploy CIS on large low-voltage cabling installations, and evaluate it for use in other regions of the country."
