# Press Release

## Vision Technologies Introduces New Nationwide Assured Practices™ Program

**Glen Burnie, Md. – April 2, 2007** – Vision Technologies, Inc. a premier engineering and integration provider of telecommunication networks and one of the nation's top 100 fastest-growing entrepreneurial companies is pleased to announce a new nationwide Assured Practices™ Program. Using innovative cabling installation systems (CIS), the Program is geared towards providing customers with better network performance and manageability through cost-effective, consistent installation methods.

"The evolving telecommunications industry is experiencing new technologies and higher speeds that require evolving installation practices," says John L. Shetrone, Jr., president. "As a company dedicated to remaining innovative and continuously training our staff, we recognize the need to update our installation processes to better serve customers in today's advanced network environment." Shetrone said. "After careful research of the CIS market, we selected Beast Cabling Systems, Inc. as our CIS provider. The innovative components and effective training provided by BCS had our program up and operating quickly."

By adopting the latest CIS components for all network installations, Vision Technologies' new Assured Practices Program will ensure that customers receive an installation based on best practices, consistency and standards adherence. This is especially critical for today's 10-Gigabit copper network cables that require more careful handling. With CIS, Vision technicians now have an effective means of separating, organizing, and managing network cables during installation to conserve time, reduce cabling waste, and improve accuracy that ultimately results in better network performance and manageability.

For Release 9 a.m. EDT, April 2, 2007

“By having a consistent installation method for all our trained technicians, we can more accurately estimate project costs, stay ahead of schedule, and provide customers with high-performance networks that don’t just meet the standards, but exceed them,” says Shetrone. “Through our new Assured Practices Program, we are dedicated to continuing our commitment to 100% Customer Satisfaction and our world-class level of service for every project moving forward.”

Vision Technologies, Inc. is a full service Network Infrastructure provider located in the St John Properties International Trade Center just south of BWI Airport.

Vision Technologies, Inc. currently has four operating divisions for Networking and Cabling Services, Global Services, Technical Services and Federal Systems. Networking and Cabling Services provides voice/data/video cabling, network integration and network management services. The Global Services division provides national rollouts and deployment services for Fortune 100 clients. Through the Technical Services division, Vision provides advanced technical solutions including network security, wireless networking for voice and data networks, CCTV/Surveillance systems and Audio/Visual solutions for corporate, as well as residential clients. Vision Technologies is a Prime Contractor for the GSA VETS GWAC, a \$5B IT Services contract. Visit [www.visiontech.biz](http://www.visiontech.biz).

Beast Cabling Systems provide improved processes for cable installation. For more information, go to [www.beastcablingsystems.com](http://www.beastcablingsystems.com)
